SUMMARY

Passionate Computer Science Engineering student with a strong foundation in Java, Python and Data Structures and Algorithms. Passionate about Machine Learning, aiming to develop innovative models and algorithms. Eager to contribute to cutting-edge projects, solve real-world problems, and continuously grow in the field of intelligent systems and AI-driven innovations.

EDUCATION

Chandigarh University: BE-CSE(AIML) (GPA: 7.45*) — Aug '20 — Present

Sri Chaitanya Junior College: PCM (GPA: 95.3) — Jun '20 — Mar '22

Medha International School (GPA: 10.0) — Jun '19 — Feb '20

SKILLS

Languages and Tools: Java, Python, SQL
Libraries & Tools: pandas, NumPy, Matplotlib, Data Visualization, Git, Github
Web Technologies: HTML, CSS, streamlit, Flask
ML/DL Frameworks : Tensorflow, OpenCV, PyTorch
Concepts: DSA, ML, DL, Computer vision, OOPs, DBMS, Forecasting Models, Convolutional Neural Network
SoftSkills: Analytical Thinking, Critical Thinking, Debugging, Quick learner, Decision-Making, collabarative

EXPERIENCE

Artificial Intelligence Intern- — Feb '25 — Apr '25
Infosys-Springboard

- Developed "Forecastly", a web-based tool for dual forecasting of electricity demand and market price using historical data and prophet time-series models, enabling accurate seasonality-aware predictions.
- Built an Interactive UI with Flask backend, integrating real-world datasets, dynamic date-range selection, and visually intuitive forecast results for enhanced user engagement and insights.

PROJECTS

Automatic Real Time Emotion Detection — Jan '25 — Mar '25

- Developed a responsive web application that captures real-time emotions through camera and provides automatic feedbacks based on detected emotions.
- Utilized a Convolutional Neural Network(CNN) for emotion classification, integrated with a Flask Framework for seamless website creation.
- Combined front-end responsiveness and back-end efficiency to deliver an engaging user experience.

Electricity demand and Price forecasting using AI Technology — Feb '25 — Apr '25

- Developed Forecastly, a smart web tool that predicts both electricity demand and market price using historical data and seasonality-aware machine learning, enabling users to input custom date ranges and visualize dynamic forecasts.
- Python, Flask, Prophet ML, Pandas, Tailwind CSS, HTML/CSS — featuring an interactive UI and a lightweight, scalable Flask API.

Optimizing Doctor Avalability and Appointmnet Allocation in Hospital — Feb '24 — Apr '24

- Developed and deployed a machine learning model using Random Forest and Decision Tree to optimize doctor scheduling and reduce patient wait times by 25 percentage, integrated with the hospital system via Flask.

CERTIFICATIONS

Azure AI Fundamentals by Microsoft
Internship at InfosysSpringboard
Generative AI for Data Analysis by Coursera

ACHIEVMENTS

- Published research paper titled "Real time Emotion recognition for Human Computer Interaction" in IJNRD. The paper received positive feedback for its innovative approach to facial recognition efficiency.
- Successfully completed a virtual internship through Infosys Springboard, gaining practical insights into industry-level projects and professional skills.
